Creating a Company Culture for Security

Step-By-Step Assignment Instructions

Overview: Now that you're super knowledgeable about security, let's put your newfound know-how to the test. You may find yourself in a tech role someday, where you need to design and influence a culture of security within an organization. This project is your opportunity to practice these important skillsets.

Assignment: In this project, you'll create a security infrastructure design document for a fictional organization. The security services and tools you describe in the document must be able to meet the needs of the organization. Your work will be evaluated according to how well you met the organization's requirements.

About the organization: This fictional organization has a small, but growing, employee base, with 50 employees in one small office. The company is an online retailer of the world's finest artisanal, hand-crafted widgets. They've hired you on as a security consultant to help bring their operations into better shape.

Organization requirements: As the security consultant, the company needs you to add security measures to the following systems:

- An external website permitting users to browse and purchase widgets
- An internal intranet website for employees to use
- Secure remote access for engineering employees
- Reasonable, basic firewall rules
- Wireless coverage in the office
- Reasonably secure configurations for laptops

Since this is a retail company that will be handling customer payment data, the organization would like to be extra cautious about privacy. They don't want customer information falling into the hands of an attacker due to malware infections or lost devices.

Engineers will require access to internal websites, along with remote, command line access to their workstations.

Submission: You should write your document using a text editor or word processor (e.g., Google Docs, Microsoft Word, OpenOffice, etc.). You should upload your document in PDF format (i.e., my_submission.pdf). Please do not upload your submission using proprietary software extensions, like .docx or .pptx.

Grading: This is a required assignment for the module. The assignment is peer reviewed, so after you submit your response, you'll need to review and evaluate three submissions from other
